Introduction To PMV

PMV mounts have been designing and manufacturing products in the heart of the UK for over 40 years. With cutting edge manufacturing technology and an experienced workforce, we manufacture all our own products with an emphasis on build quality, workmanship and customer service.

We have a long-standing range of AV products centred on robust screen mounts and market-leading trolleys used across all key AV verticals. We manufacture bespoke kiosks and lecterns, used for information display and interactivity. We welcome bespoke enquiries from simple colour changes to ground up custom solutions.

Why Choose PMV?

PMV mounts are UK designed and manufactured products for the Audio Visual and Custom Installation Market.

Designed and manufactured in the UK, PMV mounts support over 50 staff in the Midlands and dozens of UK suppliers for raw materials, fixings, finishings and packaging. As a UK brand, we can respond swiftly and accurately to enquiries.

PMV mounts products all come with a lifetime warranty on materials and workmanship, to the original installer. We guarantee that our design, product and workmanship will outlast the product it's designed to secure or mount.

Our PMV guarantee is unique to PMV mounts. We backup the fitment of our products whereby if the screen is within the weight limit and VESA specification of our mount, trolley or stand, we guarantee it to fit - "If it doesn't fit, we'll make it fit free of charge."

Bespoke Product Design

Manufacturing in the UK doesn't have to be expensive. All our products are manufactured in house, using the latest in CNC laser-cutting and metal forming. We can turn your challenging requirements into successful solutions with our custom project service.

PMV Mounts In Education

With the education sector adopting the latest technology products in the classroom, blended and hybrid learning continues to be a popular teaching style, allowing for agility of learning and increased engagement from students.

The adoption of technology is becoming even more important in further and higher education. Universities and colleges have an ever-increasing need to house the latest technology products to attract students and provide them with the skills needed when entering the employment market.

AV Trolleys And Stands

Collaborative, workgroup-oriented spaces with the latest screens, content sharing and even video conferencing technologies are popping up all over campuses. Whether they're used for 1-to-1 teaching, break out groups or independent study, huddle spaces provide students with everything they need for collaborative and creative thinking.

Research has shown that touchscreens have the advantage of being able to capture the attention of even very young students whilst improving comprehension and basic skills among children. Adding interactive displays to primary schools helps to engage children, whether they're kinaesthetic, visual, or audio learners.

Children learn best when they're involved and interested, and for the digital native youngsters, the latest technology is a vital tool in keeping them engaged.

Our PMV range of Trolleys and Stands are purposely designed for securely housing interactive displays around schools, colleges and universities that require robust, safe, and secure equipment. Providing manual and electric solutions for ease of use, PMV products are simple to assemble, offer portrait and landscape viewing positions and are designed for easy access through a standard door width.

Charging Trolleys In The Classroom

Whether schools are providing IT devices or asking for students to bring in their own, classrooms need to be able to store these devices safely and securely and provide a place for devices to charge.

Classrooms aren't built to enable 30 students to all be plugged into the mains, charging their devices at the same time; there aren't enough plugs or enough power. Furthermore, most classrooms are laid out so that the students face the front of the class, not to facilitate charging from a plug on the wall.

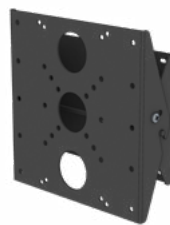

The NEW range of PMV charging trolley solutions for Tablet and Notebook products satisfy all such obstacles. Providing 4 different sized options, these trollies are laser cut steel constructed that provide a robust and secure finish to handle the most demanding of environments.

Need branding to a specific colour or logo? We can customise the PMV charging carts to any RAL colour or add a logo or name for personalisation.

Wall Mounts

Fits
21-40"

PMVMOUNT2053	TILT
Max Weight	25kg

Did you know...

All PMV mounts products come with a lifetime warranty on materials and workmanship, to the original installer.

PMV Guarantee

The PMV guarantee offers peace of mind when specifying a PMVmount product for your project. We guarantee fitment for your screen size and VESA – if it doesn't fit we'll make it fit free of charge.

PMVDESKTOP2

Desktop Stand Mount

pmvmounts

During a working day, you can spend hours at your desk at a time, only to realise you've developed a pain in your neck. This discomfort can be cured by using a monitor mount

Aluminium and steel construction, designed and manufactured in the UK

FREE standing desk mount

Only 10kg in weight, aiding for simple set up

Suitable for monitors of up to 32", perfect for home or work office

Adjustable tilts and a 360-screen rotation, this monitor stand allows for complete versatility in your working space

Elevate your working environment

Monitor mounts are flexible, allowing you to make ample adjustments and re-adjustments to the height and tilt of your screen, rather than being bound to one viewing position. This is down to the monitor mount's ergonomic design.

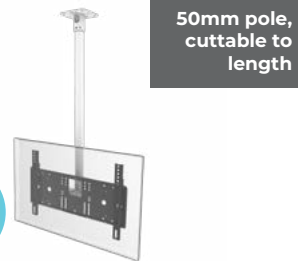

Using the flexible height adjustment on both these mounts, users can set the screens to the desired height to improve body posture.

EV Charging Kiosks – Pod point

We're proud to partner with Tesco & Volkswagen to deliver the nation's largest retail EV charging network.

With over 40 years of experience in international product design, we were handpicked by the client for our expertise in delivering premium quality products within the Audio Visual and Digital Signage sectors.

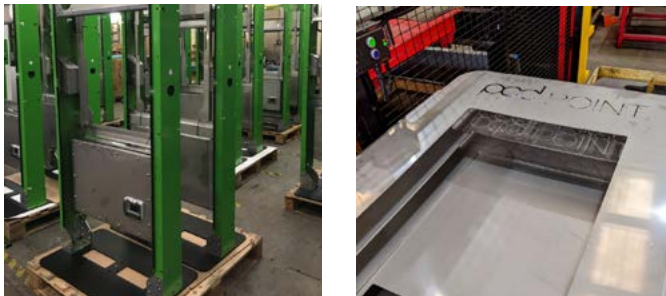

Based in the UK, our 6000 square foot factory contains some of the latest and most advanced manufacturing technology, allowing the customer to work alongside our design and manufacturing teams to develop a purpose-built Electric Kiosk. Using 3D CAD software and prototype components, we produced a number of stainless steel, pre-production samples for comprehensive and rigorous testing, including handling the fiercest of storms and accompanying wind speeds exceeding 160mph. Having the knowledge that the Kiosks would not tipple over and remain secure in one piece was paramount to the project's development. This provided the customer with both the trust and confidence required in approving the final design.

By giving transparency to every stage of the manufacturing process, the customer was able to witness how the Kiosks took shape from the initial laser steel cutting, right through to paint and corporate branding, all completed under one roof.

With strict timeframes in place to ensure on-site delivery paired up with the arrival of installation partners, our packing and transit part of the business ensured the safe arrival of each Kiosk to their destination, ahead of time and in pristine condition.

With the rollout in full swing, drivers now have access to over 400 charging bays. From design, our bespoke Kiosks form the charging bays that will continue to be rolled out in Tesco Extra and Superstore car parks throughout the UK.

The units in our workshop

Contact your Account Manager to see how we can help you with bespoke projects.

Our Custom Process

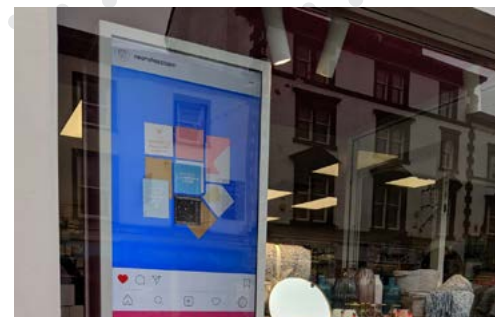

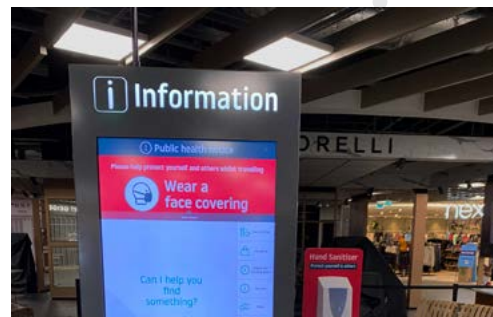

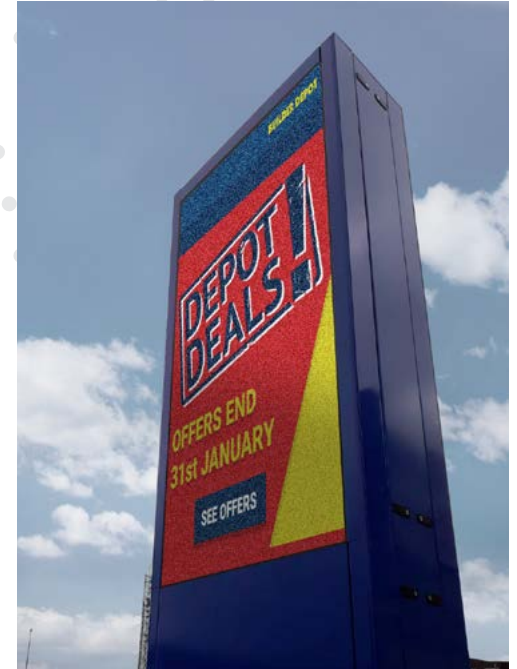

– easy as 1, 2, 3...

We have over 40 years of experience in designing and manufacturing customised solutions for our clients. From mounts & brackets to digital signage kiosks and lecterns, our bespoke service can create an entirely new product from scratch, a simple revision or straightforward colour change.

Designed and manufactured in the UK, bespoke solutions are inexpensive and personalised. At PMV, we'll take your idea or concept and bring it to life. Drawn up and produced in-house, we'll meet your required delivery expectations while reducing your carbon footprint.

Five simple questions are needed to start your custom design:

- 1 What solution is needed?
- 2 How many units are required?
- 3 What hardware is going to be used?
- 4 What environment is it being placed into?
- 5 When is delivery required by?

We also distribute through Square One! Meaning your needs and requirements can be facilitated both in the UK and Ireland.

Looking For A Bespoke Kiosk Requirement?

Looking for a bespoke kiosk requirement? Use the PMV Mounts configurator, found online at PMVMounts.com. Customise your specific needs and receive a one of a kind kiosk that's built to last.

Our Three Step Process

1

Concept - Quotation

Provide in as much detail as possible the requirements for your custom project. PMV Mounts will then provide a written quotation within 2 working days and a concept design within 5 working days.

2

Prototype - Sign-Off

With agreement on design concepts signed off, a prototype is supplied for testing and approval. Pre-production prototyping is repeated until we reach the final sign off.

3

Production - Delivery

Following sign off on the prototype we will work with you on a mutually agreed delivery schedule and arrange dedicated transport to your chosen location.

Case Study

Airport Kiosks Bristol/Luton

Tasked with designing Information Kiosks for both Luton and Bristol Airports, our design team produced a range of slimline solutions that showcased shopping, facilities, assistance and more - creating a seamless journey for passengers and visitors.

Positioned in high traffic environments, the client's brief included the need for structured-sound signage stations offering a modern and design-led exterior that incorporated the airport's branding. Through recommendation and viewing our designs in similar environments, the client was assured that we had the knowledge and skill to deliver a digital signage solution that brings added value to their daily operation.

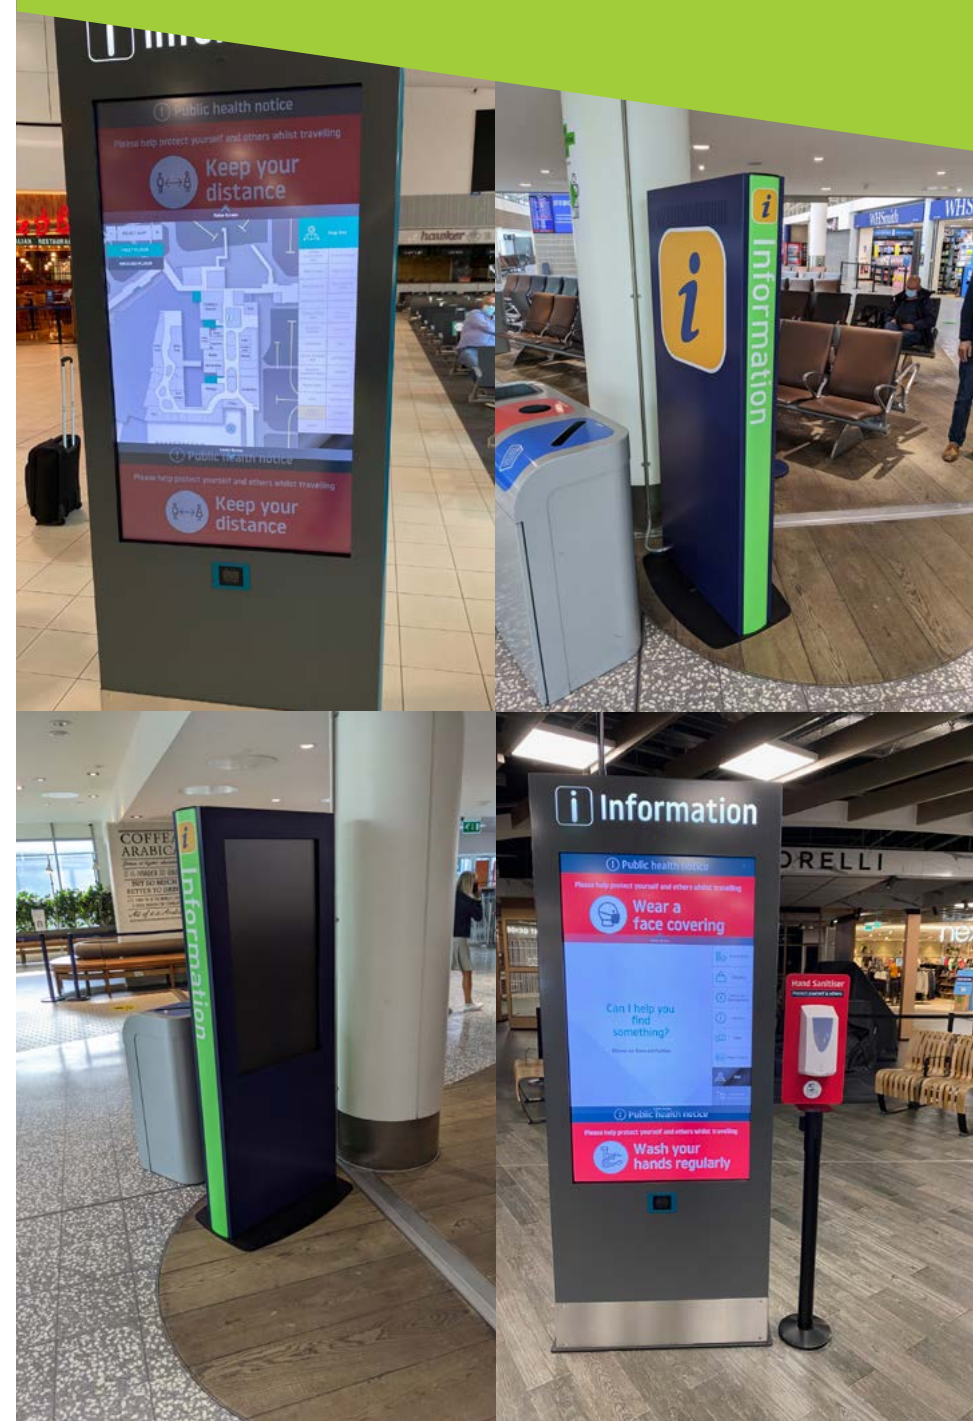

Ensuring the Kiosks received maximum exposure, especially as information points where time can be sparse for those late arrivals, we worked with the client on a number of visual colours and aids to highlight their positioning. This included bright, vibrant and stand out POS, laser-cut logos, plus the addition of partnered hand sanitiser stands.

Commitment to deliver the product simultaneously with an in-house launch was the final requirement to tick off. With full control over the manufacturing process and not having to rely on outsourced services, we were able to guarantee a production and delivery time ahead of schedule.

Built as single- and double-sided solutions, the Kiosks accommodate the main screen, additional media equipment and ventilation resource to allow 24hr consistent high-quality performance.

*As per the client's brief, we also added in bottom kick panels for extra protection from inexperienced airport trolley drivers!

Watch out for them next time you're in any of these terminals
