5 Reasons

to Choose the Samsung 130" LED All-in-One Bundle

1. 130" HDR Large Screen Display with No Bezel

Perfect for an uninterrupted viewing experience - the 130" All-in-One LED display is bigger than a standard setup of four 55" LCD videowall displays and has the added bonus of being without bezels.

2. Exceptional Image Quality Even in High Ambient Light Environments

The direct-lit LED technology with bright and high contrast means that the screen can be clearly seen even in challenging high ambient light environments. No need to turn down the lights or shut the blinds.

3. Perfect Size for Large Office Meeting Rooms

A typical ceiling height in a modern office is 2.7m, so the 130" display sits between the desk and ceiling height perfectly, enabling ideal viewing for up to 20+ seat capacity. Not only this, the modular nature of the screen means building access for installation is easy.

4. Slim, Space-saving Wall Mounting System Included

Expertly engineered for screens such as the Samsung 130" All-in-One LED display, this mounting solution from Peerless-AV offers a low-profile depth, precision alignment and quick assembly.

5. A Complete Site Survey, Delivery and Installation Service from our Certified Samsung LED Specialists

Ensure complete customer peace of mind by letting our certified LED experts take care of the site survey, delivery, installation and setup. Our installers will attend in unbranded clothing so can be seen as an extension of your team. Included in the service is a customer handover and completion report, plus full pixel repair cover and returns management.

What's included

- Single supplier service
- Full pixel protection

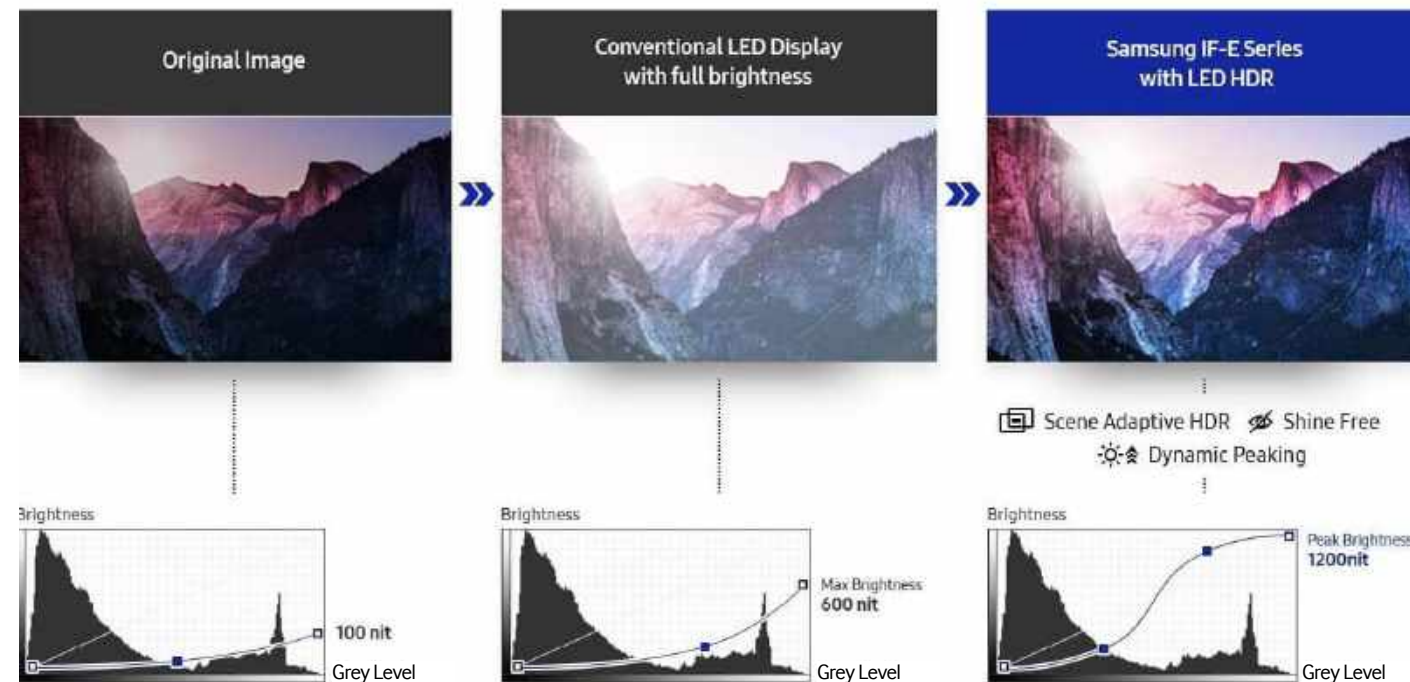

Why Samsung LED?

Unique benefits of SMART LED Signage

SMART LED Signage combines best-in-class picture quality with a reliable design to empower future-thinking businesses to reach the next level. LED displays align colour calibration, video processing, remote management and content creation tools to produce a more brilliant visual expression.

Bright and Clear LED Expression

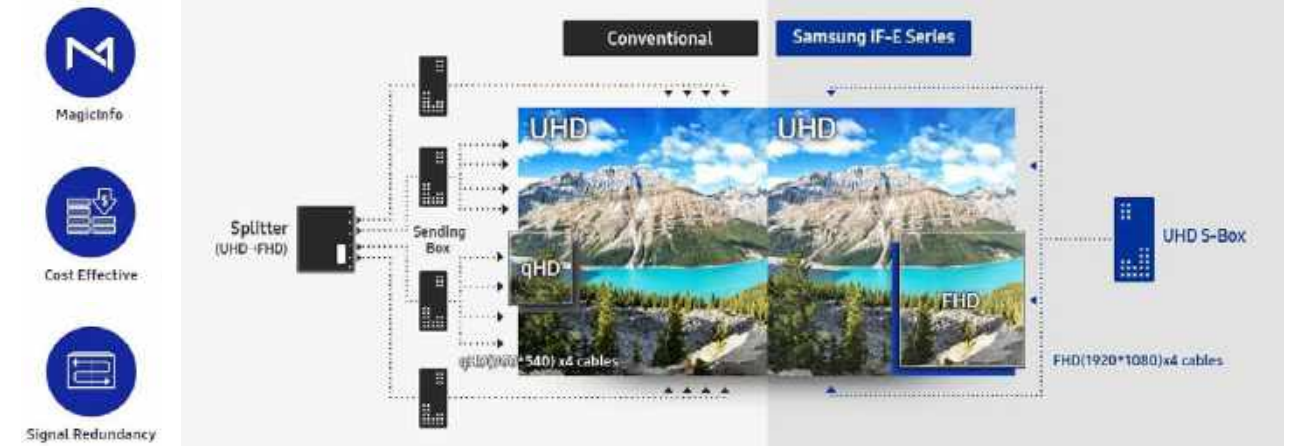

The IF-E Series' integrated HDR adaptation optimises gradation within individual scenes for a consistent, dazzle-free presentation. For added detail and quality, the displays' complementary dynamic peaking elevates peak brightness to levels nearly two times higher than the standard LED maximum.

*Peak/Max Brightness can differ by model code

Versatile and Efficient Operations

An all-inclusive design simplifies management for indoor businesses. Samsung's LED Signage Box (S-Box) transmits UHD content across multiple screens without requiring splitters or external boxes. The integrated MagicInfo platform also streamlines content creation, scheduling and deployment.

Remote Management Enabled

By aligning Samsung's MagicInfo content management platform with the LED S-Box, IF Series users can remotely program and modify their entire display network's settings within a single source. MagicInfo users can create, schedule and deploy content across multiple displays directly from their personal devices. The platform's extensive visibility also empowers users to monitor and adjust display settings and troubleshoot potential performance issues from any location via remote access.

Additional Support & Services Available

Want to get more out of a product? Our demonstration team can help.

Our team of Samsung LED experts at Innovation House in Bracknell can help you to identify the right solution by offering advice, demonstrations and training.

Can we help you with cash flow?
